

Abstraction – Educating into Abstraction
By Istevan Mesravan and Illean Krushev for Yugoslavia

- I. Abstraction how to Study it every day – the basic education for 20 years on all subjects following Maurice Cornforth's Dialectical Materialism and Historical Materialism Essay

Imagine history, the development of commodities, money and even companies and factories, now just abstract each thing one can imagine before one in this syntax. The totality is the abstraction and the concrete thing is the thing abstracted to form units and abstract ideas.

- II. Abstract books – Hegel's Science of Logic – Just abstract its ideas, follow ideas then. Philosophy.

I abstract the book Science of Logic to mean pure being is multiplicity, now I abstract again methodically, that it is also essence which is organised matrix of necessity, and now Notion I also abstract which is how contingency becomes necessity- imagine that as an Emergence which then produces emergences like events even this can be applied on cinema and that is Deleuze in the future – his logic of sense book – it imagines things emerging like cars in a scene which are racing which emerges further into a close up of the driver and him checking his car.

- III. Logic of Abstraction of History and Every element in fact Methodically – Behave in Method all the time. Mechanical Behaviour in Methodical fashion on Abstraction.

Now I abstract the work Graeco-Roman history by Croix – I abstract it talks about production process, then about method in Marx as applied to Greek social structure, it is then about slave mode of production and then in an essay by Croix which is finally his meaning, about the economic structure of finance in this mode, based on coinage and coins alone which is why billing in promissaries called notes and note printing begins in capitalism and is so fully of money and money billing ideas.
